

Rustic Africa Thatch

These unique shade products are made from authentic African thatch that comes in pre-thatched panels that are easy to assemble. Thatch gazebos provide complete shade covering, with the ultimate protection against U.V. rays to create a cool luxurious roof that will bring a tropical atmosphere to any area.

These canopies compliment any beach holiday resort, outdoor restaurant area, side-walk café, or that shaded entertainment area in your backyard.

Rustic Africa Thatch

Introduction

Add a sense of Africa by using our affordable and unique shade products that give your area distinct character. Our shade products, available in gazebos and umbrellas, come in pre-fabricated thatch panels that require low-maintenance. Replaceable and interchangeable panels in various combinations of shapes and sizes make it easy to update the look of your shade product.

Application

Thatch gazebos provide a complete shade covering, with the ultimate protection against U.V. rays to create a cool luxurious roof that will bring an island atmosphere to any area. There are infinite ideas and possibilities, thatch can be utilized in hotels, beachfronts, gardens, restaurants, outside entertainment areas, or to create extensions to your space. Used in the place of shingles, you can create an absolutely authentic African roof. Up to 10 degrees cooler than outside, Rustic Africa Thatch create comfortable outdoor living and entertainment areas, ideal for barbeques on hot or rainy days, and are 100% waterproof. Our product is cooler than metal, canvas, clay, concrete tiles, polycarbonate and shade cloth. Rustic Africa Thatch's unique insulation qualities mean less heat lost after dark, warm in winter and cool in the summer. You can be sure that there is no condensation, making our product ideal for outdoor spas and jacuzzis.

Specification

The product is available in modular pre-thatched panels, that are easy to install. Rustic Africa Thatch is made from hardy long sheaths of grass which grows widely throughout Southern Africa. The panels are hand-made by skilled craftsmen, and the grass is thatched to 120mm thickness. The thatching is tied directly onto the metal frames with galvanized binding wire which are completely hidden from view. The grass compacts easily and thickly to create its insulation and waterproofing qualities. The method in which the grass is fixed makes it impenetrable to various weather conditions. The frame is made of 9mm mild steel which is hot-dipped in galvanized 19mm tubing. The roof is pitched at 30 degrees to ensure waterproofing. All the poles are specially treated with a chemical called Tanalith. For gazebos, the height of the poles above ground is approximately 2.1m, and around 2.8m for the umbrellas. There is a chemical available on request for an additional cost to fire treat your shade product. The thatch products are made from replenishable and renewable resources, and the harvesting of thatch promotes growth, making our product environmentally friendly.
